

Felix Häse Device Transcript

Introduction:

1. showing the problem – mobility challenges for visually impaired individuals
2. presenting possible solutions + its gaps – white canes (helpful but limited detection)

Presentation of the company:

3. vision behind our product – enhancing independence through smart technology
4. presenting the product SmartCane – smart cane with sensors, navigation and safety features
5. possible users (primary) – blind and visually impaired people, seniors with mobility risks
6. design philosophy – practical, comfortable, not overly techy

Functions:

7. obstacle detection – sensors detect objects ahead and warn user through haptics
8. navigation support - Bluetooth connection + subtle vibration guidance for routes
9. stair/drop-off detection – warns for curbs, stairs and sudden drops

Specifications/Technology:

10. ergonomics and material – lightweight (carbon fibre), durable, ergonomic handle, foldable
11. smartphone integration – app for navigation, updates, emergency alerts
12. audio assistance – offers audio descriptions when needed
13. emergency features – SOS button shares live location with caregivers
14. battery + charging – all-day battery, USB-C or wireless charging dock

Marketing:

15. testing and development – involvement of visually impaired communities to refine design
16. branding + identity – SenseCane = empowerment, mobility, independence
17. market + target customers – private persons, healthcare providers, rehabilitation centers
18. pricing – standard and pro version, 249\$ for basic features, 349\$ for premium features -> luxury product but still affordable
19. marketing strategy – partnerships with disability organizations, special programs for people who can not afford one
20. closing vision - “Smart mobility for everyone — freedom in every step”
